HOW TO USE THIS BOOK

ANIMAL ART IN THE PUBLIC DOMAIN is a collection of over 2,000 pictures culled from 46 known sources and a few private sources. These pictures have been subdivided into 82 categories.

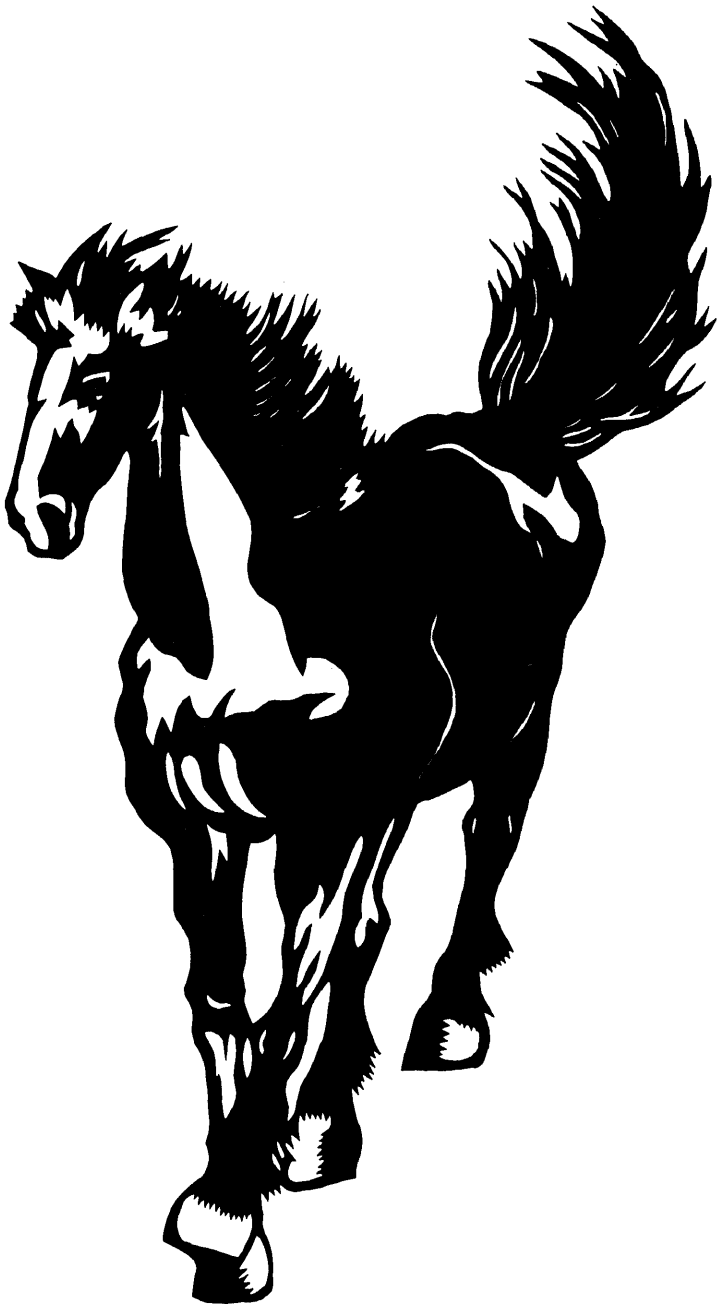

All these pictures are in the public domain. They derive from magazines, books, private collections, and pictures copyrighted by Hart Publishing Company, now released to the public for general use.

So as not to clutter a caption, the source of the picture is given an abbreviated designation. Full publication data may be found in the *Sources* section, in which all sources are listed in alphabetical order, with the full title of the book or magazine, the publisher, and the date of publication. The *Sources* section commences on page 391.

Captions appear beneath all those pictures which require specific identification. For example, illustrations which depict an artist's conception of an animal—the Chinese cutout included in the *Horses* category—are not captioned.

This book contains a voluminous index, set forth on page 392. A picture may have several listings in the index. For example, a picture of a vulture would be listed under the general heading of *Birds of Prey*, and would also be listed under the specific variety of vulture.

All index entries set in full caps represent one of the 82 major groupings in the book.

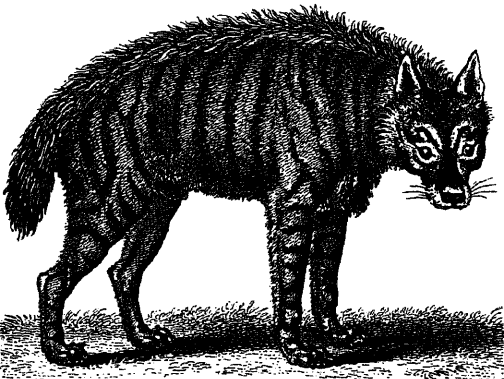

Animal Art in the Public Domain

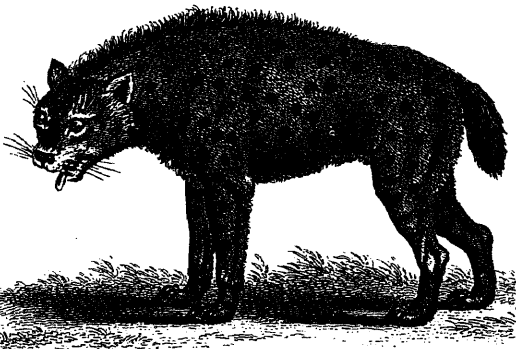

Aardwolves & Hyaenas

Gathering of striped hyaenas. *Animate Creations*

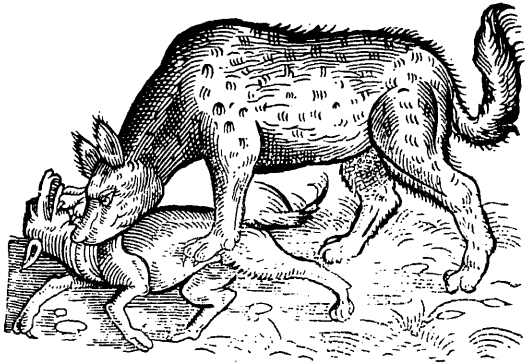

Striped hyaena. *Plates of Natural History*

Spotted hyaena, *Plates of Natural History*

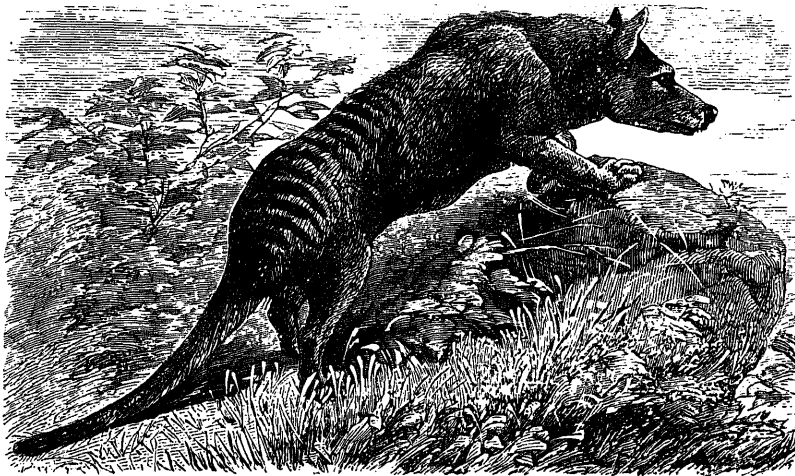

Spotted hyaena. *Lydekker*

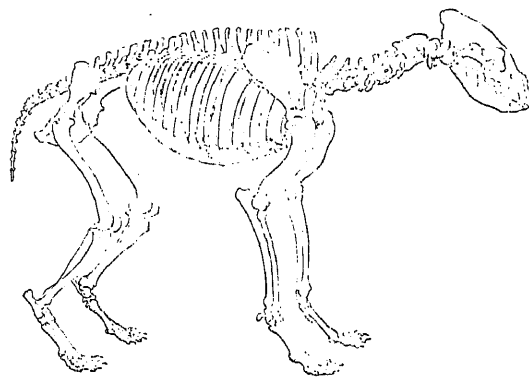

Hyaena. Fanciful & Real Beasts

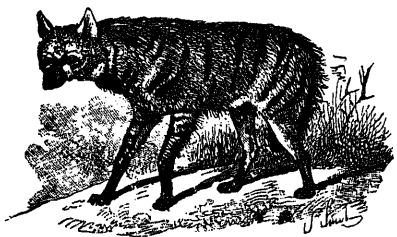

Brown hyaena. Lydekker

A detailed black and white engraving of a group of tortoises in a natural setting. In the foreground, a large tortoise is shown in profile, facing left, with its head and front legs extended. Behind it, several other tortoises are visible, some resting and others moving. The background features a rocky, hilly landscape with sparse vegetation and a small stream or path winding through it. The style is characteristic of 19th-century scientific illustrations.

A detailed black and white illustration of a turtle, possibly a tortoise, shown from a side profile. The turtle is walking on a rocky or uneven ground. Its shell is large and textured with many small, dark spots or patterns. The head is extended forward, and the legs are visible, showing a scaly texture. The background is simple, with some light shading to suggest the ground.
